

# RIT-PAK™ II

## EMERGENCY RESPONSE SYSTEM

Specifically designed for Rapid Intervention Teams (RIT) or Emergency Response Teams, the Scott Rit-Pak II emergency response system allows members to quickly supply emergency air to a downed or trapped team member. The Rit-Pak II emergency response system allows for multiple connections to all Scott Air-Pak NFPA 1981, 2002 Edition SCBAs and their accessories. Its universal air connection wand is also available in lengths of five, 10 and 25 feet.

The portable and lightweight Scott Rit-Pak II emergency response system is carried in a combination cotton and nylon bag, specially-designed for durability and convenience. Multiple storage compartments allow for storage of an extra facepiece and regulator to replace a damaged or lost facepiece on scene in addition to additional tools and other needed equipment. The carrying bag is also designed to allow the Rit-Pak II emergency response system to be dragged or carried with the victim.
